**DETAILED ACTION**

***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the roller-burnishing must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claim 12 recites the limitation "the radial leg face" in line 6. There is insufficient antecedent basis for this limitation in the claim.

4. Claim 8 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Roller Burnished.

***Claim Rejections - 35 USC § 102***

5. Claims 8-20 rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Ineson in view of Morishita. Ineson discloses in fig.2 a motor housing that is slipped with the gear housing (66) slipped on the gear housing wherein the gear housing (46) has an angular groove (74) into which an encompassing annular bead (1) and radial shoulder (14) is remote from the housing, which is engaged from behind by an annular collar (1b) bent inward from the motor housing and an annular rib (19f) whose other annular rib face forms a radial extension (2b) of the radial leg face of the chamfer (2a). Ineson does not disclose a short circuit ring for the purpose of securing it to the permanent magnets to act as part of the magnetic field.

Morishita discloses in fig. (1) an electric motor comprising a motor housing and a gear a stator and a short circuit ring (4) secured to permanent magnets (5) for the purpose of preventing the permanent magnets from being damaged. Therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the electric motor of Ineson with the short circuit ring of Morishita for the purpose of improving both retention and sealing.
